

Supply Chain Risk Brief - Nimbus Semiconductors (Fictional)

Nimbus Semiconductors operates Factory G, a chip fab located in Penang, which is in the Southeast Asia region. Factory G produces the QX-9 Processor, an automotive-grade component for next-generation driving systems.

The QX-9 Processor is used in the AeroDrive-700, an advanced driver-assistance product. The AeroDrive-700 is sold to Acme Corp, a major North American automaker.

Supplier Kappa supplies rare-earth magnets used in the QX-9 Processor. Supplier Kappa is located in the Africa region.

A recent Typhoon in Southeast Asia has disrupted operations. This risk event affects Factory G, halting production of the QX-9 Processor for several weeks.

As an emergency measure, the QX-9 Processor has an alternative source through Supplier Kappa, which can package compatible dies.
